| <b>Comments /notes on tonight's mission and this interpretation:</b><br><p>The Western and Eastern sides of the fire have large amounts of intense heat. The Southern portion of the fire has scattered heat. There are numerous isolated heat sources within the middle of the fire. There were two isolated heat sources outside the heat perimeter on the South East portion of the fire, Lat/Long coords are on the maps. The fire is South of the power lines across the North Umpqua River, West of Bob Butte, East of Britt Creek, and North of Engles Creek.</p> |   |  |   |
